

1. Add Some Records In Existing Table

Sql Query :- INSERT INTO employees(emp_name,emp_salary,dept_id) VALUES('Sidesh',34000,2);

2. Apply Window Function On The Data

Sql Query :- SELECT emp_id, dept_id, emp_salary,
ROW_NUMBER() OVER (PARTITION BY dept_id ORDER BY emp_salary DESC) AS row_num,
RANK() OVER (PARTITION BY dept_id ORDER BY emp_salary DESC) AS standard_rank,
DENSE_RANK() OVER (PARTITION BY dept_id ORDER BY emp_salary DESC) AS tight_rank
FROM employees;

3. Apply View On the Data

Sql Query :- CREATE VIEW employee_department AS
SELECT e.emp_name,e.emp_salary,d.dept_name FROM employees as e
INNER JOIN departments d ON e.dept_id = d.dept_id
WHERE e.dept_id = 1;

4. Apply Triggers on the Data

Sql Query :- DELIMITER //
CREATE TRIGGER before_employee_insert
BEFORE INSERT ON employees
FOR EACH ROW
BEGIN
-- If a negative salary is provided, automatically reset it to 0
IF NEW.salary < 0 THEN
SET NEW.salary = 0;
END IF;
END //

DELIMITER ;

5. Handle Case When in the Data

```
Sql query :- SELECT *,CASE e.dept_id  
WHEN 1 THEN 'Information Technology'  
WHEN 2 THEN 'Computer Science'  
ELSE 'Other Department'  
END AS departmentName  
FROM employees as e
```
